

RXJS

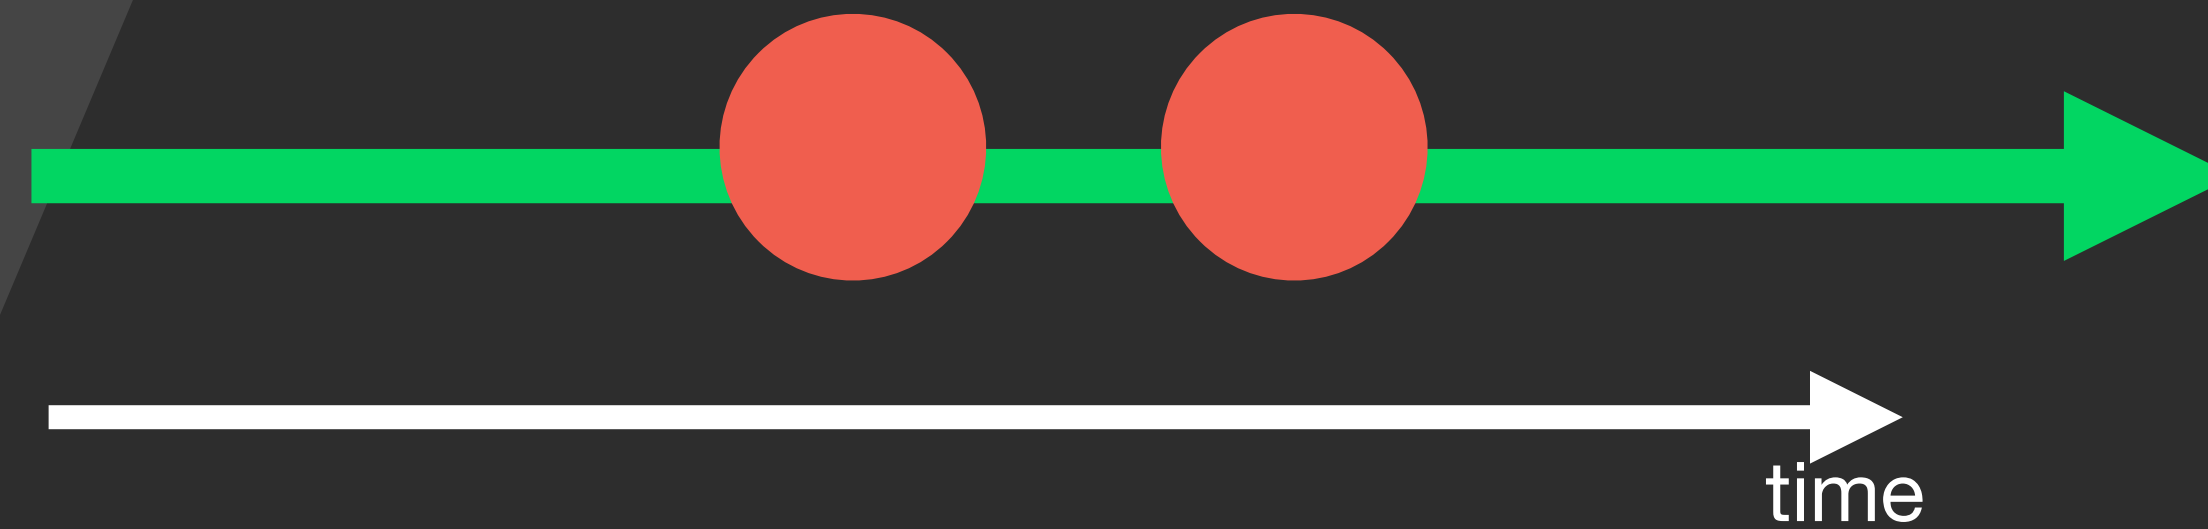

1. Let's learn to use RXJS

Welcome to RXJS Chapter!

- In this chapter we will learn to use RXJS
- RXJS is usually used to help us deal with our async code.
- Angular framework is built with RXJS so it is a prerequisite for learning Angular
- RXJS is built with Typescript, we will learn to use it with Typescript
- In this chapter you will learn
 - ▶ How RXJS works
 - ▶ Handling async code with RXJS
 - ▶ Operators to solve common problems
 - ▶ Proper way for dealing with Errors

RXJS for async code

- We can also use RXJS to help us deal with async programming
- Unlike Promise which can be resolved/rejected once, RXJS can deal with a general case of multiple resolved data

Observables - Stage 1

- At the time of writing, Observables are marked as stage 1
- The proposal is approved for ready to advance to stage 2
- RXJS is going to be part of Javascript which makes learning it even more important

Thank You
