@angular/cli - advanced

6. Deployment

Deploying your angular app

- Deploying your angular app will make it available online

- There are different platforms that can host your app, even for free

Routing considerations when deploying

- User can navigate to your app using angular routing

- User can navigate to your app using browser navigation

  ▸ Example pressing reload in one of the page

  ▸ Example following a link from his mail account

- Different routes when navigated with the browser should be directed to the same **index.html** as the root route

Hosting on firebase

- firebase has a good free plan for hosting your site

- Run the following commands to deploy to firebase

  ▸ npx ng add @angular/fire

  ▸ npx ng deploy

Thank You
